### ENGINEERED IN JAPAN

The world knows that Japanese designed and engineered products represent the highest quality, especially for Industrial Products. The hydraulic excavator is no exception when a totally integrated concept is required in design work involving key components, manufacturing engineering, and product quality assurance in the factory.

SUMITOMO hydraulic excavators are designed and manufactured today to meet the global demands of our many customers with the concept of Performance, Reliability, and Fuel Efficiency foremost in our minds. This proven Japanese technology and quality gives SUMITOMO excavator customers total peace of mind and provide a complete solution for the demands of the construction industry.

**Performance Refined.  
Evolution Defined.**

New Engine System **SPACE 5+ PLUS** + New Hydraulic System **SIH:S+ PLUS** = **14% Reduction in Fuel Consumption**  
(as compared with SH210-5 [H mode])

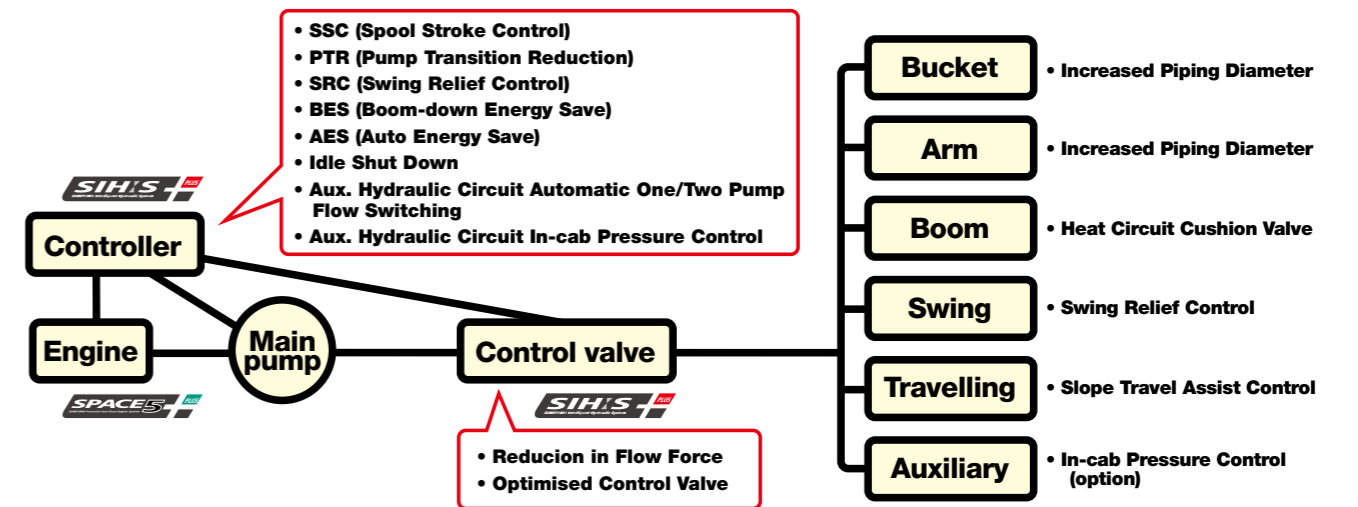

**New Generation Engine System "SPACE 5+"**

The new engine system optimises fuel efficiency and environmental performance via the advanced common rail fuel injection system, cooled EGR system, and turbocharger. At the same time, excellent response times are achieved.

**Engine and Hydraulics**

SH210-6 has achieved a 14% reduction in fuel consumption in comparison with our DASH 5 series, by fusing the new generation engine system "SPACE 5+" and the new hydraulic system "SIH:S+", further refining fuel efficiency. At the same time the newly developed ISUZU engine, contributes greatly to the environment.

**Mode Selection by Throttle** (SUMITOMO UNIQUE DESIGN)

There are three working modes available: SP (Super Power) for heavy duty applications, H (Heavy) for normal working conditions, A (Auto) for a wide range of operations.

**Further Improvement of Fuel Consumption**

The new technology has improved operations and reduced fuel consumption on each working mode.

- SP mode **11% reduction in fuel consumption**
- H mode **14% reduction in fuel consumption**
- A mode **13% reduction in fuel consumption**  
(as compared with SH210-5)

\*Fuel consumption may vary from time to time depending on site and working conditions, operator skill and other circumstances.

**ECO Gauge Showing Low Energy Operation**

The energy saving conditions can be seen at a glance, as well as the fuel consumption indicator shown on the monitor.

**SUMITOMO Technology for Fuel Efficiency**

- **SSC (Spool Stroke Control)** (SUMITOMO UNIQUE DESIGN)  
Reduces engine load upon heavy duty operation.
- **BES (Boom-down Energy Save)** (SUMITOMO UNIQUE DESIGN)  
Lowers engine speed upon boom-down and swing operation which does not require large oil flow.
- **AES (Auto Energy Save)** (SUMITOMO UNIQUE DESIGN)  
Lowers engine speed accordingly when low engine load is sensed.
- **PTR (Pump Transition Reduction)**  
Decreases engine load when the pump flow requirement is reduced upon abrupt pump load.
- **Idle Shut Down & Auto Idle**

Upon activation, idle shut down automatically shuts the engine down when the machine is not in operation for set amount of time. Auto Idle is also available, which makes the engine begin idling approximately five seconds after the operation levers are in neutral position.

**Performance Refined.  
Evolution Defined.**

## Engine and Hydraulics

**SUMITOMO's original technology Spool Stroke Control (SSC), perfectly matches the engine and hydraulic power, and further improves the operational speed whilst maintaining smooth control of the machine.**

### Work Efficiency Drastically Increased

Spool Stroke Control (SSC) variably controls spool port flow rate, depending on the condition of operation. Improved power, speed, and smoother controls mean that work efficiency is dramatically increased.

### 4% Faster Cycle Time (SP mode)

Speed increase by 4% in cycle time has been achieved, giving further advance in productivity (as compared with 210-5 [SP mode]).

### Real Digging Power

The true digging force can not be expressed by a maximum digging power figure listed in sales brochures. With an improved hydraulic system and with a large arm cylinder, the arm-in motion speed slowdown is minimised. The digging power when combined with the attachment speed in motion convert to the operator's "Real Digging Power".

### Automatic Power Boost

The digging power increases automatically in quick response to the working conditions during heavy-duty digging work. This is a design unique to SUMITOMO, and continues for eight seconds (SP/H mode).

### Speed and Power, Dramatically Increases Productivity

• SP mode

**4% faster cycle time**

• H mode

**4% faster cycle time**

• A mode

**5% faster cycle time**  
(as compared with SH210-5)

\*Based on SUMITOMO's testing condition and results.

### Operating Condition Easily Viewable on Display

Various control such as working modes and auxiliary hydraulic setting can be easily selected by the universally designed switch panel, and what's being selected can be easily viewed on the 7" wide monitor.

# Durability and Maintenance

## EMS (Easy Maintenance System) as Standard

SUMITOMO's EMS keeps the pins and bushes fully lubricated at all times and prevents rattling. This system significantly extends the service life of the pins and bushes.

The lubrication interval around the bucket is 250 hours, and for the other sections is 1,000 hours, keeping the joints lubricated for a long time and extending the service life of parts by reducing abrasion and rattling.

- **Bucket greasing interval: 250 hours**
- **Greasing interval for other sections: 1,000 hours**

\* The greasing interval depends on the working conditions.

➡ Sections equipped with steel EMS bushing  
➡ Sections equipped with EMS bushing

### EMS bushing

**A** A solid lubricant embedded in high strength brass forms a layer on the bushing surface to prevent contact between metals, maintaining an excellent lubricated state to reduce abrasion of joints.

**B** The surface of the pin is plated to increase the surface hardness and improve the wear resistance accordingly.

### Steel EMS bushing

Steel EMS is installed around the bucket

- ① Grease is enclosed, however greasing is necessary every 1000 hours or six months depending on the level of dusting conditions.
- ② Greasing is also necessary after any components have been submerged underwater for prolonged periods.
- ③ Greasing is also recommended after use with hydraulic breakers, crushers or other high impact attachments such as Rock Saws etc.
- ④ Bucket pins should be cleaned thoroughly when removing or attaching new buckets.

Precautionary use of EMS
